Git Ignore

GIT Ignore

- When sharing your code with others, there are often files or parts of your project, you do not want to share. Git Ignore file is only one for working directory & apply to all branch.

- Examples

- Log Files
- Temporary files
- Hidden files
- Personal Files

- Git can specify which files or parts of your project should be ignored by Git using a .gitignore file.

- **Rules for Git Ignore: Click Here**

GIT Ignore

- Create New Folder

- Create Some files in the folder with multiple types

- We have created two java files & two text files
